FT-ROLLER

Motor Rollers

Motor rollers can be called “motor drive roller”, “drum rollers” , “powered roller”, they are compact for belt conveyors while keeping very high torque. The rollers are supplied with a standard seal and external rustless casing, ideal for use in the food industry where extreme levels of hygiene and frequent high pressure washes are needed. Automation industry is also applied, which can boost speed and operate efficiently.

Motor Rollers

Length: usually 650 mm~900 mm / customized

Rollers with reinforced shafts are available, and standard drum has a plastic planetary gear train.

Material: generally made of steel, aluminum or stainless steel with different power cord terminals.

Other custom options are available upon request.
